Oracle E-Business Suite Implementation Services

Estuate's Oracle E-Business Suite implementation services enable customers to maximize their investment in Oracle technology and avoid common implementation challenges, such as low user adoption and lack of scope control. By working closely with clients from the initial project planning phase through completion, Estuate ensures that its customers' EBS deployments are optimized according to their unique needs.

Estuate offers the following EBS services:

Development of an implementation, upgrade and consolidation strategy

The success of large-scale IT project implementation depends on sufficient planning. Estuate develops a technology roadmap that outlines the initial setup and configuration of Oracle EBS as well as a plan for how EBS integrates to other applications. This allows clients to see how the technology will be used by business users before the project begins.

1. Application enhancement services

Most businesses are finding that they need to adapt software to their specific needs. Estuate's in-depth knowledge of Oracle applications allows custom EBS enhancements to be made quickly and in synergy with functionality in other areas. Customers gain the advantage of interfaces that are built specifically for their users and, as a result, gain more productivity from their software.

2. EBS integration with other software

Modern enterprise software is heavily dependent on data from other applications, but integrating two or more applications can be difficult if there is a lack of familiarity with application interfaces. Estuate's encyclopedic knowledge of hundreds of applications and how to integrate them, eliminates errors and shortens the time required to integrate software.

3. Post-implementation support, including coding and design documentation

Estuate provides post-implementation support to lower the total cost of ownership of EBS. This includes documentation on configurations and customizations so internal teams are able to understand how to best manage their applications. Clients may also opt to leverage Estuate for EBS application upgrades. Estuate's expertise in Oracle solutions drives down the management expenses and time-to-deployment associated with EBS.

This end-to-end strategy helps customers avoid the common pitfalls that can emerge in an EBS implementation. For example, many businesses purchase new software only to find out later they would require a hardware upgrade to use it effectively. Leveraging Estuate's dedicated Oracle team allows customers to better plan for the resources necessary to complete a project and proactively make infrastructure adjustments that might be required.

Why Estuate?

Oracle E-Business Suite brings many integrated features to the table, but those tools can only produce value for companies if they are configured properly and have the hardware to support them. Applications such as CRM, HCM and financial management apps form the backbone for numerous operations. This is further complicated by the fact that many businesses want to customize their software to better meet unique needs. This means that enterprise applications must not only offer guaranteed performance and accessibility but also adapt to evolving needs. Estuate's services ensure that initial implementation goes smoothly, but the benefits of leveraging robust third-party expertise extend beyond efficiency in the development phase. Through its in-depth knowledge of Oracle architecture, Estuate is well positioned to provide customers with continued support after deployment.
