

Itron Enterprise Edition Archive Solution

Enterprise applications and databases do not just help you run your business - they are your business. And every year, they grow in size and complexity, making them harder to manage. Uncontrolled data growth threatens application performance and service level agreements, increases maintenance costs, and exposes enterprises to legal liability for data privacy and security. Enterprise data management (EDM) focuses on the creation of accurate, consistent and transparent data content and is concerned with how the content is integrated into business applications.

Itron Enterprise Edition (IEE) Archive Solution is an enterprise data management product that addresses the critical issues of data growth management for Itron's Enterprise Edition Meter Data Management product. This solution is owned, sold and implemented by Estuate **as Itron's approved partner for data archiving. Estuate is one of IBM's strongest partners specializing in the implementation of the IBM Optim Solutions, and was chosen by Itron to ensure a sound solution for Itron customers.**

IEE Archive Solution Benefits

The Archive Solution is based on the industry-leading [IBM Optim Solutions platform](#). It works with IEE 7.0 and later, on Oracle and Microsoft SQL Server. It is a flexible archiving tool that supports the execution of your corporate data retention policy, by providing an out-of-box template for the IEE database. Using this template (customizable for each client), you can extract data from your production database based on flexible selection criteria, and move this data to an archive repository.

The IEE Archive Solution provides several key benefits:

- It keeps your IEE production system lean, with consistent size over time
- It reduces disk storage cost in your production system, and by extension in your non-production copies of IEE
- It reduces system management effort
- It maintains your historical data in an accessible data repository for ongoing business, audit, and regulatory compliance purposes
- It enables you to proactively manage your data through to the end of its useful life, in accordance with your corporate data retention policy
- It creates a new corporate asset—the Corporate Archive Repository, which can be used for other critical applications, as well

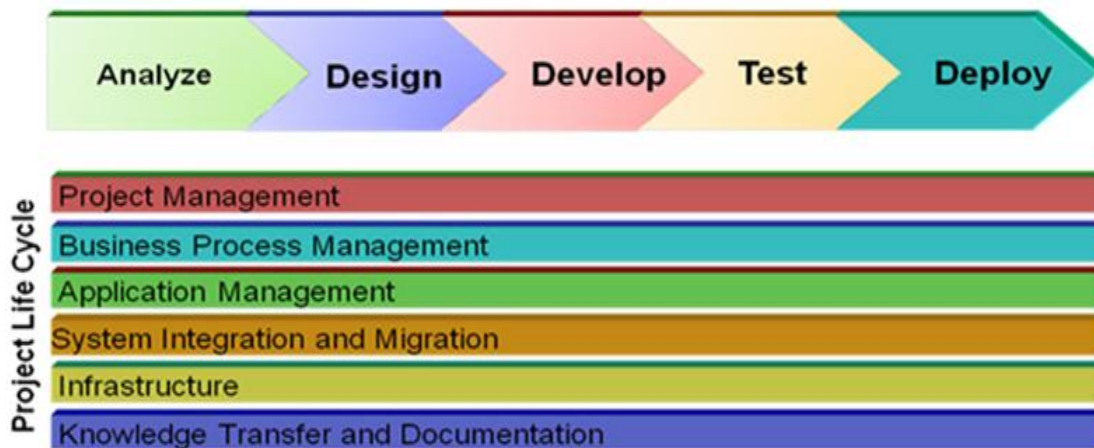

IEE Archive Solution Implementation Services

Unmanaged data growth can strain financial and technical resources, jeopardizing the completion of business-critical processes on schedule. We apply our clients' functional requirements, data retention regulations, application logic and validation rules to the IEE Archive Solution to control our clients' unmanaged data growth at the source. We also train your team fully to use it.

IEE Archive Solution Implementation Methodology

Our IEE Archive Solution Implementation Methodology leverages best practices based on our experience with archiving solutions and database technology. Hence, customers are assured of a timely, dependable and supported solution for the life of their Itron investment that they can use to improve productivity, control data volumes, manage cost and reduce data exposure risk.
