

Estuate's Revitas Data Archive Services

Enterprise applications and databases do not just help in running the business - they are your business. And every year, they grow in size and complexity, making them harder to manage. Uncontrolled data growth threatens application performance and service level agreements, increases maintenance costs, and exposes enterprises to legal liability for data privacy and security. Enterprise data management (EDM) focuses on the creation of accurate, consistent and transparent data content and is concerned with how the content is integrated into business applications.

Revitas Data Archive is an enterprise data management product that addresses the critical issues of data growth management for Revitas products. Estuate is Revitas's go-to partner for Revitas Data Archive implementation services.

Revitas Data Archive Implementation Services

Unmanaged data growth can negatively impact application performance and strain financial and technical resources, jeopardizing the completion of business-critical processes on schedule. We apply our clients' functional requirements, data retention regulations, application logic and validation rules to Revitas Data Archive to control our clients' unmanaged data growth at the source.

The Revitas Data Archive Implementation Methodology

The Revitas Data Archive Implementation Methodology was developed with best practices, based on our experience with archiving solutions and database technology. Hence, customers are assured of a timely, dependable and supported solution for the life of their Revitas Data Archive solution investment that they can use to improve productivity, control data volumes, manage cost and reduce data exposure risk. The methodology is built to support implementation of Revitas Data Archive technology and utilizes Estuate Consulting Services to deploy the software solution as turnkey solution within customer organizations.

Our proven Revitas Implementation Methodology addresses the full system life cycle

Some of our 100+ Enterprises Data Management Clients:

Why Estuate?

Estuate is a global technology services company, headquartered in Sunnyvale, California. We specialize in the implementation of Revitas Data Archive.

Our main focus areas are:

Implementation of Oracle technology and applications family: End-to-end analysis, design, development, support, implementation, web-services integration, data migration and upgrades for enterprise applications from Oracle (Oracle E-Business Suite, Siebel, PeopleSoft and JD Edwards)

Implementation of IBM's Optim Solutions: Data Growth (archiving), Test Data Management, Application Retirement, and Data Privacy Solutions services. Our Revitas Data Archive services fall under this practice area.

Custom application and software product development: Architecture, design, and development; integration leveraging leading technology platforms; data migration; and data quality management.

Big Data: We help our clients understand their Big Data assets, identify their analytical requirements, define the available solution technologies, and match the requirements to the right technology.
